Chain Transfer, 1,500 LB. Capacity, 2.75" Lift, External

Chain Transfer Conveyors provide a method for right angle, directional changes within a Chain Driven Live Roller Conveyor (CDLR). Product conveys on the roller conveyor and when prompted, a pneumatic cylinder raises the chain up between the rollers and transfers product off the conveyor. This rugged design, capable of handling up to 1,500 lbs., is ideal for transferring pallets, containers, structural steel, and similar heavy loads. The "external" chain design is useful for transferring products that require minimal gaps in order to convey properly.
